"No, ma'am. No, Miss West. That is, I haven't told her positively she could come. I thought maybe you mightn't like it."

"You knew I would not like it, Mrs. Holliday. I leased you my house with the understanding that would board with you, and that any other boarders you might take should be perfectly unobjectionable people. Now, a child is the most thoroughly objectionable creature in the world."

"But, Miss West, this is such a good little dear, and so pretty. Dear me! She's a fair little beauty. Her mother is Susan Price, whose husband was killed in the mill last year. Poor thing! she's got to work hard for herself and her child.

there, or the child either." "Not know the child was there! You can't tell me. I know how it would be. They are all alike-little demons that scream half the night, and catch whooping cough and measles on purpose to aggravate you; tumble down stairs, pull your flowers, and slip into your room and make it a chaos in two minutes. Oh, shouldn't I know the child was here!" Miss West smiled scornfully, and the plump kind-hearted landlady winced a little. Then,

A RETIRED BUSINESS WOMAN.

She spent two hours in the poorhouse, doing what she conceived to be her duty, in reading dry books to the inmates and listening to the detailed accounts of their ailments. Her face looked a little tired and worn when she came out at length into the balmy spring sunshine.

She stopped at a florist's on her way home and purchased an exquisite little tea rose in full bloom. It was in a pot and she thought how pretty it would look in the center of her tea table and how sweet it would smell.

"Thank you, Miss Jones," she said to the young woman who served her; "I should like best to carry the rose tree home myself.

of Liverpool, some seven miles distant. In building this dam a great trench was at first excavated across the valley for a length of eleven hundred feet, a width of one hundred and twenty and a maximum depth of sixty. The masonry was started in this trench; it consists of wedged together and thoroughly bedded in Portland cement mortar the faces being formed of cut stone blocks fitted together with great care, the greatest height of the dam being one hundred and sixtyone feet. Its most remarkable feature is the lack of any channel to carry off the floods, the surplus in the lake flowing down the front of the dam, which is curved to permit as free a deecent as possible and prevent the formation of eddies at the bottom. The lake formed by this main dam covers an area four and three-fourths miles long, from one-quarter to five-eights of a mile wide, and holds largely over twelve million gallons. The aqueduct leading from the intake tower to the disturbing reservoir, about two miles from the city, is sixty-eight miles long and consists principally of a large cast-iron pipe line from thirty-nine to forty-two inches in diameter. There are a number of reservoirs and tanks along the line,
